- Interpreting the Data -

Months of Inventory (MOI): used as a leading indicator to gauge future market conditions

Months of Inventory = Active Listings / Monthly Sales

Inventory > 6 months = Buyers Market

Inventory < 4 - 6 months = Balanced Market

Inventory < 4 months = Sellers Market

Sales to New Listings Ratio (SNLR): used as a leading indicator to gauge future market conditions.

SNLR = Monthly Sales / New Listings

SNLR > 60% = Sellers Market

SNLR < 40% = Buyers Market

SNLR = 40% to 60% = Balanced Market

Benchmark Price: how much the benchmark (average) house has appreciated or depreciated

Each month, the MLS® HPI uses more than 15 years of MLS® System data and sophisticated statistical models to define a “typical” home based on the features of homes that have been bought and sold. These benchmark homes are tracked across Canadian neighbourhoods and different types of houses.

Migration and Population Growth: An increase in population in the province is positively correlated with an increase in demand for housing and rentals.

Housing Starts: Increase in housing supply, when housing starts trend up or down investors are predicting stronger or weaker demand for housing.

Employment and Weekly Earnings: Positively correlates with demand for goods and services.

Bond Yields: The bond market is a good predictor of mortgage rates, inflation and the direction of the economy
Normal yield curve starts with lower yields for lower maturity bonds then increases for bonds with higher maturity.

A normal yield curve slopes upward.

Steep yield curve implies a growing economy moving which is often accompanied by higher inflation resulting in higher interest rates.

Flat yield curve shows similar yields across all maturities and happens in times of economic uncertainty.

Inverted yield curve is when short term interest rates exceed long term interests rates and suggests a severe economic slowdown.

Mortgage 90-Day Arrears: This measures the number of Canadian homeowners who are at least 90 days behind on their mortgage payments. The data is sourced from the Canadian Bankers Association (CBA) and includes reported data from the following financial institutions: BMO, CIBC, National Bank of Canada, RBC, Scotiabank, TD, Canadian Western Bank, Manulife, Laurentian Bank, and Equitable Bank (included since November 2020). An increase in mortgage arrears can signal economic challenges, while a decrease suggests a stronger economy. Homeowners in serious delinquency might need to explore options like selling their property, refinancing, or finding alternative ways to make payments—choices that depend on the economy's overall health. This information is often considered alongside housing market and mortgage refinancing trends to better understand the connections between economic strength, real estate activity, and financial stability.
